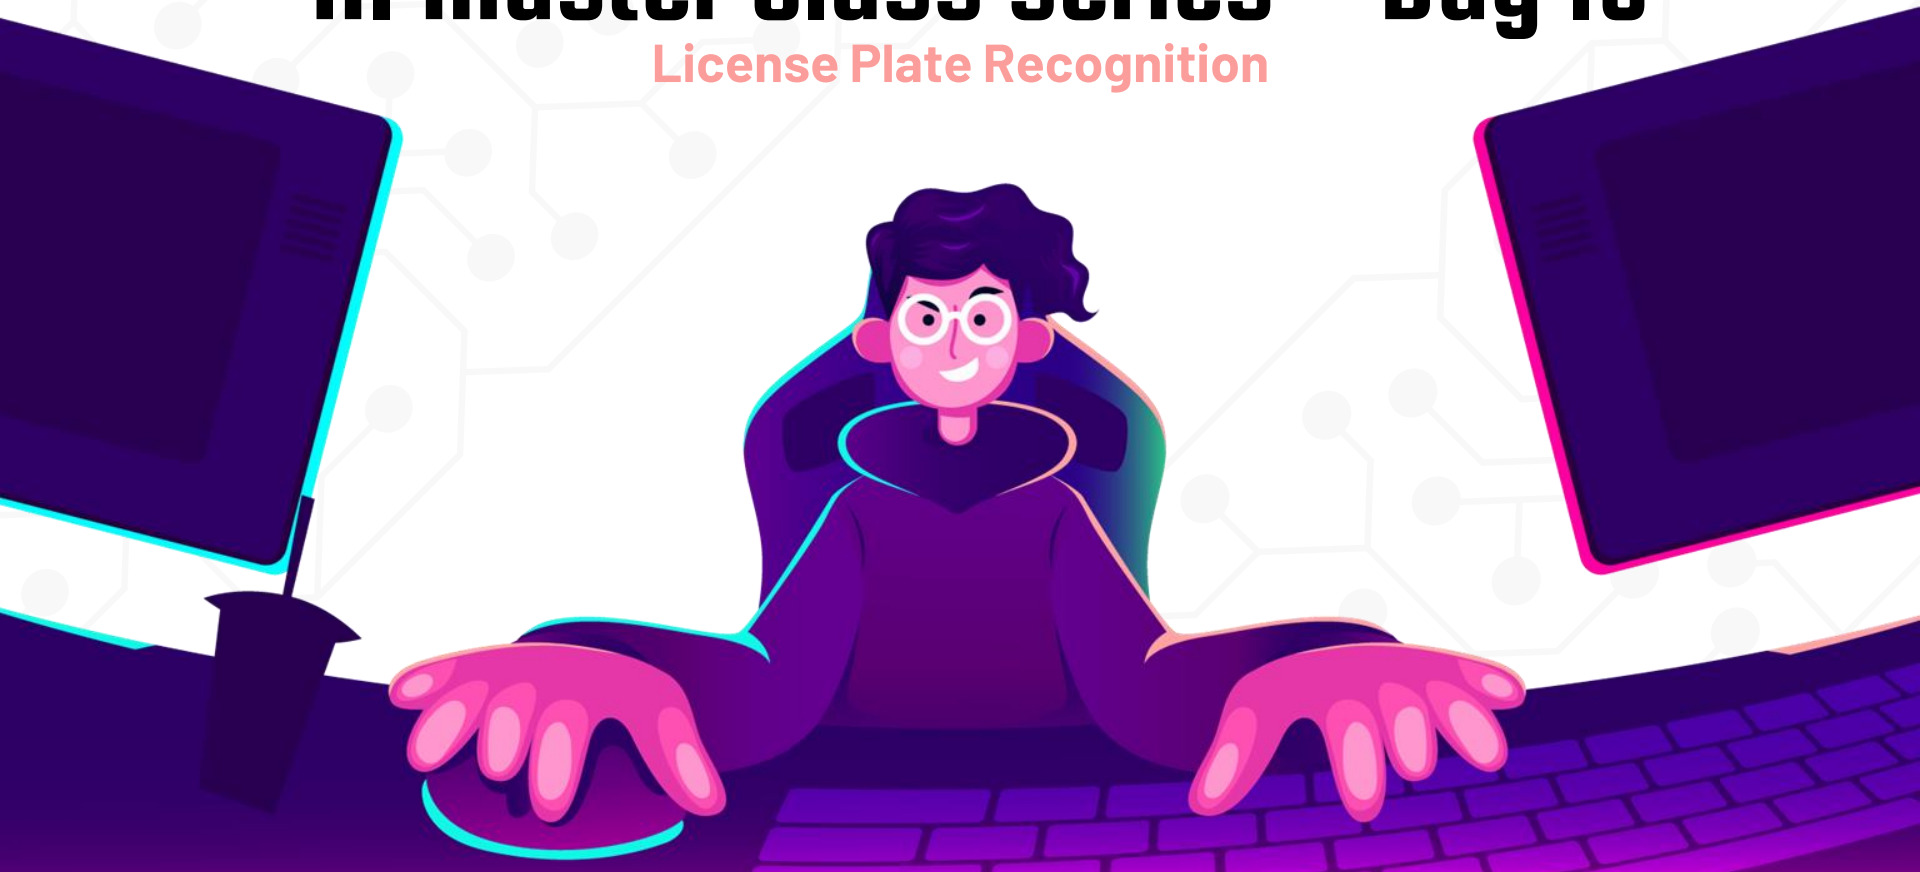
PANTECH SOLUTIONS®
Technology Beyond the Dreams

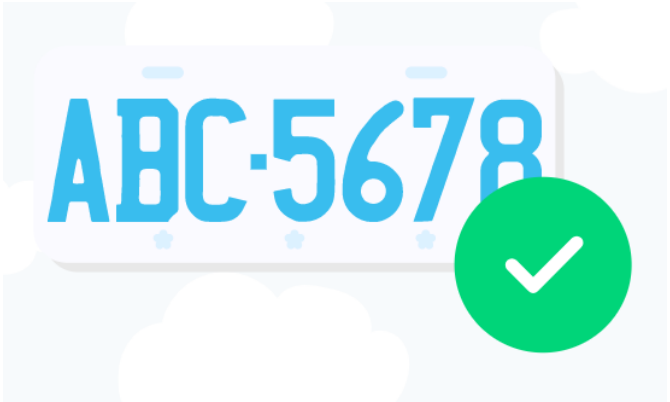
AI Master Class series – Day 19

License Plate Recognition



License Plate recognition.

- LPR (License Plate Recognition) is an image-processing technology used to identify vehicles by their license plates. This technology is used in various security and traffic applications, such as the access-control system featured in the following animation:



OpenALPR.

- The OpenALPR CarCheck API is a hosted ALPR web service for application integration. Send images to the OpenALPR cloud servers and the response will be a JSON document describing the license plates, and vehicle variables such as color, make, and body type.

- There are a number of plans that offer a fixed number of recognitions per month. Select a plan below.
