Q & A

AI in Cloud

There are hundreds of AI solutions out there. And for most companies accessing them through cloud services is the easiest way of starting to get a feeling for AI projects.

And there are more benefits of going with a large vendor first: There is for example some stability regarding up-times, API accessibility, customer support and most importantly their unfair advantage in the forms of the vast amounts of data to train algorithms with.

Google Colab

Colab notebooks allow you to combine executable code and rich text in a single document, along with images, HTML, LaTeX and more.

Colaboratory, or “Colab” for short, is a product from Google Research. Colab allows anybody to write and execute arbitrary python code through the browser, and is especially well suited to machine learning, data analysis and education.
